#### BASS PECAN COMPANY

The World's largest growers of Papershell pecan trees LUMBERTON, MISSISSIPPI

Library U. S. Dept. of Agri. Washington 25, D. C.

## Bass Bred-Up Pecan Trees Can Make You Independent in Your Old Age

FATHER BASS was 58 years old when he planted his first papershell pecans. Like thousands of other men, he had worked hard all of his life, but saved practically nothing. He was past middle age, and faced the likelihood of being dependent on his family.

In spite of the fact that friends and neighbors predicted that he would never live to see his trees bear, he succeeded through pecans in retiring with absolute independence.

Father Bass has now been gone for several years. Mother Bass at 97 years old is still enjoying nice profits from these trees. The shade and beauty of the orchard, as well as the nice profits, help her to enjoy a contented life.

Mother Bass today gives this suggestion to all who want to enjoy their retirement years with added income, as well as the joy of producing during their quiet years: "Plant Pecan Trees now."

PECAN TREES ARE TRULY A LIVING MONUMENT TO FATHER BASS.

(Winter View)

## Bass Pecans Are Better Pecans

FOR nearly 50 years the Bass Pecan Company has been furnishing its fine Bred-Up pecan trees to growers of large orchards and to home-owners of the South who know that quality in trees, as in everything else, is what counts.

Only the finest orchard trees supply the grafts and buds used by our experienced nurserymen in growing the fine Bred-Up papershell pecan trees we offer our customers. Years of care and attention are given our nursery trees before they are sold. You are assured of better pecans when you buy BASS pecans.

It has been our constant aim to furnish only the highest quality trees, and the reputation established throughout the South is one which we strive constantly to merit with our products and service—the enviable reputation that has grown as the Bass Pecan Company has grown:

"Bass Pecans are Better Pecans!"

(Summer View)

## Your Home Deserves The Finest

PECAN trees are the ideal shade and lawn trees for Southern homes. Notice the two pictures on these pages, of a simple home made beautiful and gracious by the fine trees surrounding it. For in the winter time, when sunlight is wanted, the trees are stately even though bare; and in the summertime the shade gives desired shadow and coolness.

Yet, because of the pecan tree's wonderful characteristics, flowers of all kinds can be grown underneath the trees, and permanent ornamentals develop just as you would wish. Leaves of pecan trees fall in late autumn, over a short period of time, and they appear early in the spring. And the harvest from just a few trees can make all the difference in the world to the value of your property.

Country home or City home—no home in the South should be without a few pecan trees. Give *your* home the permanent beauty and value that only pecan trees can give—give your home the *finest*—Plant Bass Pecan Trees this fall or winter.

## Stuart Pecans\_First Choice of America

T HE STUART is our first choice, and is the most popular of all the improved varieties of pecans. This variety has been more extensively planted than any other, and large plantings of this variety are being made throughout the South. The trees are vigorous, bear regularly, and resist scab. They are early and heavy bearers. The nuts are large and well-filled, the kernels are plump with a meat content of 40% to 50%, and of excellent flavor. The nut is shaped nicely, and fills well.

These nuts are easiest to grow, sell well on the market, and bring a high market price.

The major portion of our orchards is in Stuart trees, and in recent years we have topworked many other varieties, less satisfactory, over to the Stuart variety.

We recommend the BASS BRED-UP STUART pecan trees as the most profitable and satisfactory of the pecan trees. We believe it would pay you to plant these in preference to others.

## Mississippi Giant Papershell Pecans

THE Mississippi Giant pecan is no doubt the largest papershell pecan in the world. F. A. Mahan, of Monticello, Florida, is said to have paid \$5,000.00 for the parent tree at Kosciusko, Miss. The trees are sold under many different names, such as Mississippi Giant, Florida Giant, Mehan, Mayhan, Mayhand, Mahan, etc. In many sections it is doing as well as any of the other varieties, and because of the size of the nuts, and their paper-thin shells, this variety brings a premium on the retail markets. This new variety is very rapid-growing, with large and beautiful green foliage. The shell of the pecan is thin, easily crushed in one's hands, and the meat is large, easily extracted whole, with a fine rich nutty flavor that is very distinctive. It is one of the earliest and heaviest producers of all the pecan varieties. Under other names it is often sold for many times our price by other nurseries.

## Success

In some areas the Success variety is an outstanding favorite. For our many customers who request them we have a limited number of BASS BRED-UP SUCCESS pecan trees.

SHOULD WE BE OUT OF THE VARIETY YOU ORDER WE WILL SUBSTITUTE AN EQUAL OR BETTER VARIETY UNLESS ADVISED NOT TO DO SO.

## Bass Pecans And Sheep

**F** OR years now we have had the very finest of livestock in with our pecan trees. The annual cultivation of the orchards fits in beautifully with a livestock program, and pastures are constantly being improved as the land is improved, and the pecan trees grow and gain in value at the same time.

Our sheep are very fine and have done consistently well in the markets. The wool from sheep pastured in pecan groves such as shown above is very clean and last year brought a premium price in the market. The finest of Sheep are for sale at all times.

#### Pecan Trees Have No Age Limit

George Washington, the Father of Our Country, planted pecan trees about 1785, and these trees are still living and growing, a living memorial to a great American.

## Bass Pecans And Cattle

CATTLE are ideal for orchards. The annual pasture program for good orchard development and pasture development works to excellent advantage with the development of a good herd of cattle, and both the trees and animals benefit from each other's presence.

Registered Polled and Horned Hereford cattle are for sale at all times.

Above is a summertime picture of one of our Hereford herds enjoying the lush pasturage and cool shade of an orchard grove. Cattle and pecans, we think, are an ideal combination.

The World's Largest Pecan Nursery

Bass Pecan Company is not only one of the oldest, but is the world's largest pecan nursery, growing millions of pecan trees at all times. When you buy pecan trees for your home or your farm, be sure to get them from the company with the experience and the history—Buy Bass Pecans for results!

## It Pays To Plant Only the Finest Trees

m WHEN you buy a BASS BRED-UP pecan tree you get extra value for your money. We measure our trees from the ground up-you do not pay for the roots.

#### Our Trees Have The Finest Root Systems

No pecan trees have finer root systems than the trees we grow here at Lumberton. Our soil is ideal for the development of a full root system, thrifty, vigorous and healthy. We have had thousands of visitors during the past 40 years, and without an exception they have said they saw the finest pecan trees growing here that they had ever seen.

#### Our Trees Are Packed the Best

YOU can buy fine pecan trees, but if they are not dug and packed well for shipment, you have nothing when you get them, for they will not live and grow well for you. We dig our trees by hand, with especially designed and manufactured shovels, and we go deeper and get finer roots than any nursery we know of.

On this page there is a picture of a bale of pecan trees ready for shipment; trees are packed carefully and thoroughly so they will not dry out or be bruised or broken during shipment. We use the finest ways to get our choice BRED-UP trees to the customer in the best condition.

#### Call For Trees As Soon As They Arrive

WE send a notice on the day trees are shipped, so the customer may expect their arrival. When trees arrive, inspect them before accepting the shipment, to be sure that none was broken or damaged in transit. If any tree is damaged, have the postman or the expressman make the proper notation on the receipt you sign. Send us the slip showing the damage, and we can file claim. We cannot file claim unless you send us the receipt signed by the agent, showing damage to the shipment.

than three feet high, already bearing pecans.

Trees Ready for Shipment

## Planting Pecan Trees

There are two questions about planting pecan trees more frequently asked than any other: first, how many trees to plant to the acre, and second, what kind of soil in which to plant them?

On land of fair fertility, trees can be planted every 50 feet, although we would recommend planting 60 feet apart. If the ground is very rich, plant 70 to 80 feet apart. But, for the average, figure on 60 feet apart—12 trees to the acre. Please refer to the Square and Triangle methods illustrated below. You get more trees to the acre by planting the Triangle method—14 instead of 12.

Land which will grow hickory or oak trees usually grows pecan trees well. It has been well said that any land which will grow cotton will grow pecans. Well-drained land is needed for best results. Practically all lands in the Southern states will grow pecans.

The earlier in the fall season pecan trees are planted the better will be your prospects for them living, the more vigorous they will grow off, and the earlier they will begin to bear. Set out pecan trees as early as practicable after the leaves fall, in November, December, January, February, or March. Even if you cannot plant your trees until January or later, book your order early so we may reserve some of our finest trees for you.

Use a planting board in setting your trees. This is easily made by taking a plank or board about six feet long, and cutting a V-shaped groove in the center. Drive stakes in the ground where trees are to be planted; then place your planting board so that the groove is around one of the stakes. Place small sticks or pegs at each end of the planting board, in the ground; this gives you marks to come back to. Dig your hole, replace your planting board between the two pegs you set; and now you have the groove in the exact place where you want your tree to be. Put your tree into the hole, center it with the planting board, tamp the soil down to hold it there. If you do not use a planting board it is hard to get the trees in line again after holes are dug, even if they were lined up exactly right to begin with.

#### SQUARE METHOD

To plant trees by the Square Method, take an ordinary L-Square and place on the ground in order to get your lines true. Sight and place a stake 60 feet apart on each line until you reach the ends of the field, or whatever distance apart you are planting your trees. Then stake off on parallel lines at every 60 feet and plant trees at each stake. Twelve trees are planted to the acre at 60 feet apart.

#### TRIANGLE METHOD

To plant trees equidistant in all directions, use the triangle method. To get a true equilateral triangle drive a stake in the corner of the field. Then, with L-Square find the stakes along the outside lines as in square method. To get the proper distance inward attach wires to two adjacent outside stakes, the wires 60 feet long. Make arcs with these two wires, and where they meet, properly taut, drive stake for tree. Work from that stake until field is covered. Fourteen trees will be planted to the acre.

## PECAN TREES ARE EASY AN

PECAN trees do not require the amount of cultivation and care and attention that most food crops require. In some areas certain varieties require more attention than others, and that is one reason why we have decided to offer only three fine peçan varieties for general sale. These three, Stuart, Mississippi Giant, and Success, we have found to do well in all sections, and to be of high commercial value as well as to be among the finest pecans for home use.

Here in our orchards we disk the land once annually, putting in clovers and legumes. At this time we also fertilize the soil, and the trees benefit from this. This is done in the fall, just before gathering the nuts when a winter cover crop

## ND SIMPLE TO CARE FOR

is put in, so working an orchard is a once-a-year job for getting your seeding, fertilizing, and cultivating done.

Above is a picture of a battery of our tractors as they set out to harrow and disk one of our orchards and seed the pasture. But for a home lot, where only a few trees are grown, annual cultivation is not necessary. Generally the trees will get a great deal of mineral values from flower beds and plot cultivation that goes on throughout the year, and special cultivation of the pecan trees is not necessary. Once annually the trees can be fertilized and worked around, and that is all that is necessary for fine results and good production in most years.

## Directions for Planting

#### Protect the Roots

Never allow the roots of the trees to become dry or exposed to the atmosphere for any length of time from the time they reach you until they are set in the ground. Wet the roots in the bundle just as soon as you can, and if not ready to set out at once, dig a hole and put the roots in and cover up well. Place in a shady place if possible.

Set your trees at once upon arrival, or heel-in promptly as above.

#### Plant as Deep as in the Nursery

When you set out your pecan trees, plant them about the same depth they stood in the nursery. Fill in the hole with the best top-soil, packing the dirt well around the roots, especially the tap root. Keep the roots of the tree straight in their natural position, and do not bend them down by the tree.

#### Dig Large Holes — Protect the Roots

Have a large hole for your tree. Two feet wide and two feet deep is normally large enough for pecan trees; and this hole can be edged larger as trees are planted, if necessary for the larger size trees. Holes about 12 inches across, and one to two feet deep usually are large enough for pear trees.

When trees are to be planted on soil rather poor in fertility, use a good top-soil in the hole when filling it. About the best fertilizer after the tree is planted is manure scattered around the tree. DO NOT BANK IT AROUND THE TREE, but scatter it around for three feet or so. And if a commercial fertilizer is used, take it and scatter it 18 inches or more from the tree, and then work it well into the soil. Do not let any fertilizer of any sort touch the roots, for many trees are killed by strong fertilizers burning the roots before the roots get started growing in the new soil. Fertilizer placed on top and worked into the soil will have its substance taken down by rains. Put fertilizer around your trees in late winter, if possible, so that the trees will get a fine growth in the spring. When the trees are old enough to bear, use potash in some form—wood ashes will do.

#### If the Soil is Dry

If the soil is dry when the trees are planted, it is a good idea to pour a bucketful of water to each tree when the hole is about three-fourths filled, and after the water soaks in, fill the hole completely with dirt.

During hot spells during the summer, with dry weather, water the trees slightly. One bucketful per tree is usually sufficient. Make a basin-like hole at the base of the tree. Pour water, and as soon as it is soaked in good, fill the hole completely with dry dirt. This holds the moisture in, and also keeps the ground from baking. If you cannot pull dry dirt back to keep the soil from baking, Do Not Water At All. Water poured on top of the ground and left this way does more harm than good, as it will cause the tree to scald.

#### Cultivate the Soil

Keep the ground around the trees cultivated thoroughly all during the summer. Never let grass or weeds grow up around your trees, as they take nourishment and moisture from the soil which will benefit your pecan trees. Keep the ground dug up and soft at all times. Our own experience has taught us that no tree responds to care and cultivation better than the papershell pecan, and that frequent shallow cultivation is best.

#### Care of Young Trees

No pruning is necessary after you once get the trees branching high enough. The larger trees we sell will branch high enough anyway, but the smaller trees have to have sprouts cut off occasionally that come out on the body of the trees, until the branches get high enough. This may be done at any time, either in summer or winter. We do not let our own trees branch out any lower than shoulder high, or five to six feet above ground. They look better and you can work around them where they are not allowed to head too low.

#### BASS Trees Come Ready to Plant

We endeavor at all times to send out properly pruned trees, just the kind which we plant ourselves, leaving the planter nothing to do but just set them out. The taller grades of trees need to be top-trimmed, as it balances the top against the unavoidable loss of some of the roots when the tree is transplanted. Proper pruning insures the tree growing well. Our prices are made on the height of the trees when dug. When properly top-trimmed, the height is often somewhat reduced. Therefore if the height of the trimmed tree when received is less than the catalog height, this is the explanation. We measure our trees from the ground up, not from the tip of the tap root as many nurserymen do; and so our 3-4 ft. size trees are often as large as others' 5-6 ft. size trees—we don't charge for the roots.

#### \_Special Notice About Fertilizer\_

Recent experiments in our own orchards have shown us that one pound of Nitrate of Soda or Sulphate of Ammonia for each year the tree has been planted will be of great benefit and cause your trees to grow very fast. Merely spread it around the trees two or three feet from the trunk, and hoe or dig it in well. This can be done at any time from the first of April to the last of June, usually the earlier the better.

## Bass Pecans Are Bearing Pecans

BASS Bred-Up pecan trees are early and heavy bearers, developed from parent trees with these fine qualities. In this illustration you see one of our famous trees loaded down with pecans.

Pecans are a money crop. They are the favorite nut in the United States, and the demand is constant. There is no problem in disposing of a good pecan crop; in nearly all towns and cities in the South there are several tradesmen who do a flourishing business buying and selling pecans in the fall when the crop is harvested.

A farm anywhere in the South should have some pecan trees in a grove. Any home should have a few pecans around it, for beauty and for profit. We receive letters every year from proud and satisfied customers who write to tell us that just a few trees around their homes had produced enough nuts to pay the taxes.

If you have farmland or pastureland, or a city plot, put it to a profitable use. PLANT PECANS and let your place show a profit!

## Pecan Trees from the World's Finest Nursery Stock

THIS is a typical picture of BASS BRED-UP pecan trees. Here in our nurseries there are rows on rows of trees just like these . . . fine, healthy, vigorous, thrifty young trees, beautiful with rich green foliage, carefully grown especially for shipment to our customers.

Notice the beautiful green color of the leaves on these fine young BASS BRED-UP pecan trees. It is a pity you cannot yourself compare our fine healthy trees with the yellow-leaved, sickly looking pecan trees offered by many nurserymen.

Just imagine your own orchard of BASS BRED-UP pecan trees. In just a few years the wonderful young trees pictured above will be large heavy bearing trees in orchards throughout the South, where given the proper care and attention.

### World's Largest Pecan Nursery

SINCE 1900 we have grown from a very small nursery to the LARGEST GROWERS OF PECAN TREES IN THE WORLD. Our healthy, vigorous, well-rooted and highly BRED-UP papershell pecan trees are living, growing and bearing fine crops of pecan nuts in almost every town and community of the South.

Be sure you plant BASS BRED-UP pecan trees, which have been recognized for many years as the finest pecan trees in the world, as well as the earliest and heaviest bearing.

THIS YEAR IS THE TIME TO PLANT!

## Methods of Shipment

Railway Express shipment is the preferred method of getting your trees to you promptly and at a special nursery rate. Notice is sent you the day the trees are shipped, so you may expect arrival of your trees at the express office. Shipments in all cases are made Express Collect, unless special allowances are made for prepayment of shipments.

Trees which are 3-4 ft. in size or smaller can be shipped by PARCEL POST. To have your order sent by mail, add fifteen percent (15%) to your order for postage and we will prepay it. Or you can request shipment to be C. O. D. for the postage charges. If you add 15%, and postage is more than that, we take the loss. This service is rapid, and very desirable for  $R_{\circ}$   $F_{\circ}$   $D_{\circ}$  customers, since the trees will be delivered to your mailbox.

Other methods of shipment can be arranged, although the shipments by Railway Express or by Parcel Post are the best methods. Motor Freight shipment is generally unsatisfactory because of delay at terminal points, but if it is desired it is necessary that we be given the name of the delivering carrier. Railroad freight is too slow in all cases, and air express can be used, but is too expensive generally speaking, and unnecessary in the United States.

#### Special Notice

BEFORE ACCEPTING YOUR SHIPMENT from your expressman or postman, be sure to examine the bundle carefully. If trees are damaged in transit be sure the deliveryman marks this damage on your receipt. Then send us your receipt showing the extent of the damage, and we will file claim for the damage for you.

Should the package be so badly damaged that you refuse them, write us at once and we can make a duplicate shipment.

#### Government Bulletins and Experiment Stations

The United States Government maintains three large experiment stations and laboratories specializing in the culture of pecan trees. These are:

U. S. Pecan Experiment Station, Albany, Georgia

U. S. Pecan Experiment Station, RFD 6, Meridian, Mississippi

U. S. Pecan Laboratory, Court House, Shreveport, Louisiana

Write these stations if you have particular questions about your trees or crops, or for free information about pecan culture. Also write the U. S. Department of Agriculture, Washington 25, D. C. for free bulletins on pecans, if you wish:

No. 1501—Nut Tree Propagation No. 1829—Insects and Their Control

And in all Southern states the state Department of Agriculture, and its State Plant Board, can probably furnish free bulletins on pecan culture in your particular region.

#### Pecan Buds and Grafts For Sale

Thousands of buds and grafts are supplied each year to all sections of the U. S. for propagating young trees either by root grafting, or top budding or grafting. Buds and grafts are selected by experts from our finest young trees and are the finest to be had. The success of any budding or grafting depends on the ability of the operator and the quality of the material used Poor buds or grafts mean poor results even for the best propagator. Five cents  $(5\phi)$  per bud or graft, in lots of 25 or more, is the lowest price we can afford to cut back our best trees for. In lots of 500 or more we get  $4\phi$  each, and in lots of 1000 or more  $3\frac{1}{2}\phi$  each. Such fine varieties as Stuart, Success, and Mississippi Giant are furnished, and in limited quantities we can also supply Lewis, Dependable, Moore, Moneymaker, Forkert, and Davis—all fine varieties.

# THE FAMOUS BLIGHTPROOF PINEAPPLE PEAR TREES ARE AVAILABLE AGAIN!

In N recent years our pear trees have been sold out in mid-summer, long before shipping season began. This year we have determined to have enough trees to meet the demand, and all efforts have been turned to growing more and finer pear trees in our nurseries. We believe that we have enough trees to take care of orders this season, if they are sent in early. But orders sent in later may be too late for filling this year. ORDER YOUR PEAR AND PECAN TREES TODAY!

#### The Bass Blightproof Pineapple Pear

is the South's most beautiful fruit tree, and the heaviest bearing fruit tree we've ever known. No Southern home should be without some of these gorgeous trees; in the Spring the pear trees are a beautiful sight, and with their tremendous crops of pears they

are beautiful throughout the season. Notice the picture of the pear orchard in bloom: beautiful white blossoms and tall, stately trees.

THE PINEAPPLE PEAR is also a profitable fruit to grow, and one which has a great future in demand. We first grew the Pineapple Pear trees for our own use, but we found them to be of such fine quality and prolific growth, with such fine fruit, that we decided to grow these trees and offer to our customers. The fruit has been in ready demand and sells at a splendid profit; and 40 to 75 bushels of pears a year is nothing unusual for some of the older trees. Do not fail to order your pear trees early!

#### Other Pear Varieties

Close-up of Pineapple Pears

This year we are able to offer for the first time in any quantity other fine varieties of pears that seem to be ideal for the Southern orchard or home plot. These are the Cook and Cox varieties, which are fine mellow pears when ripe, and are resistant to blight. These are Mississippi developments.

And also available is the fine new ORIENT pear, developed at the University of Tennessee. This tree is large and very vigorous with an open top, and needs little if any pruning. The fruit is of the finest quality, with a creamy-white flesh of a mild sweet flavor.

These three varieties of pears are available only in the Large and Extra Special sizes, at prices shown on p. 23. We can also furnish Extra Special size Pineapple Pears this season.

#### Japanese Plums

Our Plum trees are of the very finest quality which we can buy, and we offer them each year because of repeated demand for them. These are supplied us by another nursery, and we proudly offer them to you. The plums are very fine, and are ideal both for eating and for jellies; plum trees are nicely shaped and ornamental as well as productive.

3-4 ft.—Less than 10—60c each; 4-5 ft.—Less than 10—75c each. 3-4 ft.—More than 10—50c each; 4-5 ft.—More than 10—65c each

#### Finest Peach Trees

Page Twenty

We grow many thousand bushels of peaches in our orchards. The three kinds we offer have done best of many kinds tried here.

RED HAVEN. The earliest fine peach we know. Very early bearer and fast grower. Fruit is yellow meated under a red skin and a clear seed when fully ripe. This is a real fine new peach and ripens in early June.

HILEY BELLE. Very rapid grower, prolific bearer, with a fresh, firm, excellent creamy white flesh and real peach flavor. Ripens in June. Freestone.

ELBERTA. Large, yellow, with red cheeks; juicy and of good flavor; flesh yellow. Ripens middle of July. This is an excellent shipping variety. Freestone.

#### Celeste Figs

Fig trees require little or no cultivation. They should be planted in a protected area if possible, and mulched well for their first growing year. We have grown many varieties of fine figs, but the one which we think is the best all-around fig is the CELESTE variety, or the Celestial variety as it is sometimes called. This is one of the hardiest types, and is very desireable not only for canning and preserving, but for serving with cereal as a breakfast fruit or in fruit compotes and ice creams. This fig is small to medium in size, pear-shaped, and ribbed; the flesh is firm, juicy, sweet, and of excellent quality.

CELESTE FIGS: 3-4 ft.—Less than 10—60c each; — More than 10—50c each.

4-5 ft.—Less than 10—75c each; — More than 10—65c each.

#### Apples

DELICIOUS APPLES. No apple has ever gained the popularity in so many sections of the country as the Golden (Yellow) Delicious and the Red Delicious. The apples are large and beautifully colored, flesh fine grained, crisp, melting, juicy, with delightful aroma and highest quality. Fine keeper and shipper. Tree very hardy, fast grower and heavy bearer. Same price for either kind.

#### Bass Grapes

CONCORD: (Black) Probably world's most famous variety, perfect for juice, jellies and jams.

NIAGARA: (White) The finest of the white grapes, and ideal for jellies and jams as well as juice and wines.

Prices: Less than 10—35c each

It is a pleasure to send you this copy of our latest catalog edition. We trust you will find it informative and interesting. RUSH your order now to be sure to get the trees you want, as now is a fine time to plant.

The pecan trees are very fine this season, particularly the Extra Special size in the MISS. GIANT variety. All sizes of pecan trees are still available at this printing, but some of the medium sizes are rapidly being sold, and substitutions may have to be made to fill your order.

We are now sold out of all Orient pear trees and Celeste fig trees. In the famous Pineapple Pear, and the Cook and the Cox Pear, we can furnish only the Large and Extra Special sizes. In plums and peaches we have only 3-4 ft. size trees; in the apples and grapes, we can furnish sizes as listed in the catalog.

Please make your order for more than one tree, since single tree shipments are often broken in transit. If the order does not total \$5.00 or more, add 50¢ for packing. No pecan tree larger than the 3-4 ft. size can come by mail, and no fruit tree larger than the 4-5 ft. size. If you wish Parcel Post shipment, be sure to add 15% (fifteen per cent) for postage.

RUSH your order now for extra choice Bred-Up pecan and fruit trees.

Very truly yours,

BASS PECAN COMPANY

President.

#### **OUR GUARANTEE**

ALL BASS BRED-UP Pecan Trees are guaranteed to be true to variety, strong, thrifty, vigorous, fine rooted, well dug, and well packed so that they should reach you in excellent condition. Get them promptly and plant properly so that your trees will live and grow well for you.

If damaged in transit, refuse the shipment on account of the damage, notify us and we will make you a duplicate shipment. If you have accepted a shipment which you find damaged upon unpacking, get a bad order report from the carrying agent, showing the extent of damage and forward to us. We will file claim with agent for this damage.

All fruit trees that we do not grow are supplied by reputable nurseries. We guarantee them to be of high quality, good healthy stock, and free from disease.

Should any pecan or fruit tree prove not true to variety we will refund purchase price or replace with other stock, but we are not liable for any damage beyond this.
